

MINOR PROJECT

Submitted for partial fulfilment of requirement for the award of degree

Of

Bachelor of Technology

In

Computer Science & Engineering

Batch: 2017-2021

Of

Faculty of Engineering, Design and Automation

Submitted To:

Mr. Sandeep Ranjan, Mr. Rajesh Sharma (Assistant Professor)

Submitted By:

Shivali GU-2017-1109 B. Tech CSE 6th Sem

GNA University Sri Hargobindgarh, Phagwara

MINOR PROJECT

SENTIMENT ANALYSIS OF U.S. TELECOM COMPANIES

A. DESCRIPTION

Sentiment Analysis: Sentiment analysis is contextual mining of text which identifies and extracts subjective information in source material, and helping a business to understand the social sentiment of their brand, product or service while monitoring online conversations.

Understanding people's emotions is essential for businesses since customers are able to express their thoughts and feelings more openly than ever before. By automatically analyzing customer feedback, from survey responses to social media conversations, brands are able to listen attentively to their customers, and tailor products and services to meet their needs.

Example: Using sentiment analysis to automatically analyze 4,000+ reviews about your product could help you discover if customers are happy about your pricing plans and customer service.

Applications of Sentiment Analysis

- ✓ Sentiment analysis helps businesses process huge amounts of data in an efficient and cost-effective way.
- ✓ Sentiment analysis models can identify critical issues in real time i.e. Real Time Analysis.
- ✓ By using a centralized Sentiment analysis system, companies can apply the same criteria to all of their data, helping them improve accuracy and gain better insights.

<u>Stock Market Analysis</u>: Stock Market Analysis enables investors to identify the intrinsic worth of a security even before investing in it. By using Stock Analysis, investors and traders arrive at equity buying and selling decisions. On studying and evaluating past and current data, helps investors and traders to gain an edge in the markets to make informed (buying and selling) decisions.

Stock Market Analysis or opinion mining makes use of <u>text mining</u>, in order to identify and extract the subjective content by analysing user's opinion, evaluation, sentiments, attitudes and emotions.

The objectives of Stock Market Analysis are:

- o To *mine* the public opinion.
- o To find the correlation between the moods of public.
- To help the investors to identify the intrinsic worth of a security even before investing in it.
- o To show that it is indeed *possible* to have a sense of where the market will go.

B. PROJECT DETAILS

Telecom Companies

Followings are the U.S. Telecom Companies with having the Stock under Newyork Stock Exchange (NYSE).

- 1) AT&T
- 2) Avaya
- 3) CenturyLink
- 4) Sparklight
- 5) Sprint Corp.
- 6) U.S. Cellular
- 7) Verizon

Tools & Techniques

Followings are the *necessary* tools and techniques used for the purpose of sentiment analysis of the twitter feedback.

- ➤ Twitter (Social Network Company)
- > Python (Programming Language)
- Jupyter Notebook (Software)
- Microsoft Excel (Software)
- ➤ Tweepy (Python Library for fetching tweets)
- > TextBlob (Python Library for Text Analysis)
- csv (Python Library for csv data format)

C. PROCESS OF SENTIMENT ANALYSIS

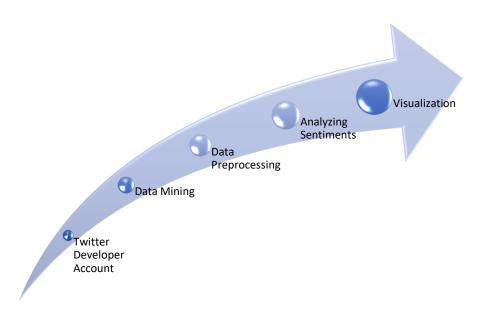

Figure 1: Process for the Sentiment Analysis of Twitter Feedback

Step 1: Twitter Developer Account

To have access to the Twitter API, you'll need to login the Twitter Developer website and create an application.

Followings are the steps to generate your Keys and Tokens:

- 1. Create a Twitter Developer account.
- 2. Create an app with your project name.
- 3. Go to the Keys and Tokens tab and generate your Keys and Tokens.

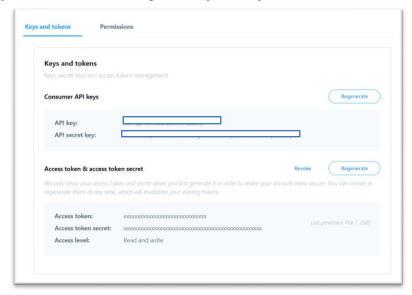

Figure 2: Twitter Access keys & Tokens

Step 2: Data Mining

- 1. Write a Python Script to mine the tweets using the Twitter Credentials against the desired hashtags.
- 2. Download the results in a '.csv' file.
- 3. Open the files using 'Microsoft Excel'.

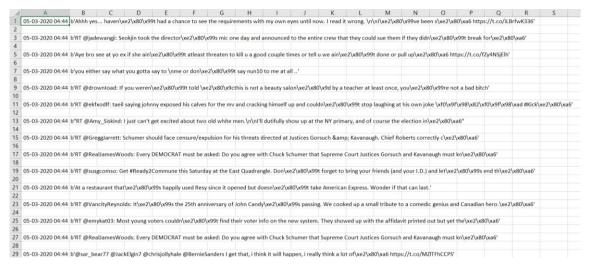

Figure 3: Tweets mined using Python

Step 3: Data Pre-Processing

Followings are the steps for text pre-processing to be followed before analyzing the sentiment score for each tweet.

Remove Duplicates

- 1. Go to the database stored in Microsoft Excel.
- 2. Click on the Data tab placed at the top of Microsoft Excel.
- 3. Select the Remove Duplicates option.
- 4. Select Ok.
- 5. You'll get the duplicate values eliminated from the database.

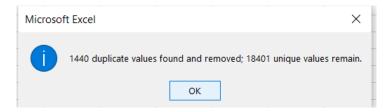

Figure 4: Removal of Duplicate values

Text Pre-processing

Write a Python script to remove un-necessary information like emoji, uniform resource locators (URL) and non-English characters using the python libraries i.e. 'TextBlob'.

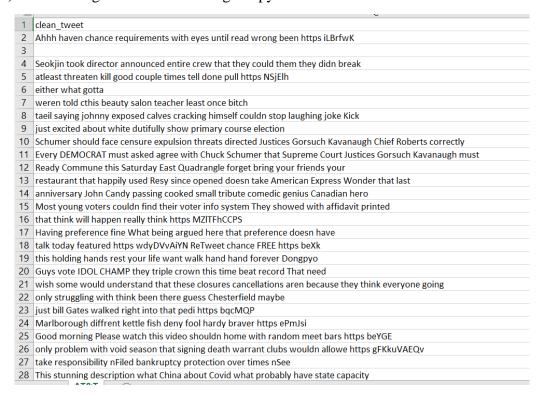

Figure 5: Cleaned Tweets using Python

Step 4. Analyze Sentiment

Python NLTK and TextBlob libraries were employed to perform sentiment analysis on the mined dataset. The sentiment function returns a tuple of properties as follows:

- 1) <u>Polarity</u>: Polarity is a floating-point number that lies in the range of [-1,1] where 1 means positive statement and -1 means a negative statement.
- 2) <u>Subjectivity</u>: The subjectivity is a float within the range [0.0, 1.0] where 0.0 is very objective and 1.0 is very subjective.

Sentiment Property	Range
Polarity	-1 to +1
Subjectivity	0.0 to 1.0

Table 1: Range for Sentiment Properties

1. Write a python script for analyzing the sentiments using python libraries and download the results in a '.csv' file.

Figure 6: Results of Sentiment Analysis

2. Analyze the results by calculating the sentiment score of each company.

Sentiment Score = Polarity*Subjectivity

3. Compare the total sentiment score for each selected company.

Sr. No.	Telecom Company	Sentiment Score
1	AT&T	4.32%
2	Avaya	4.32%
3	CenturyLink	6.30%
4	Sparklight	4.68%
5	Sprint Corp.	2.28%
6	U.S. Cellular	5.34%
7	Verizon	5.06%

Table 2: Resulted Sentiment Score

Step 5: Visualization

Create an Excel Dashboard representing the collected no. of tweets, cleaned tweets and the comparison for results of Sentiment Score.

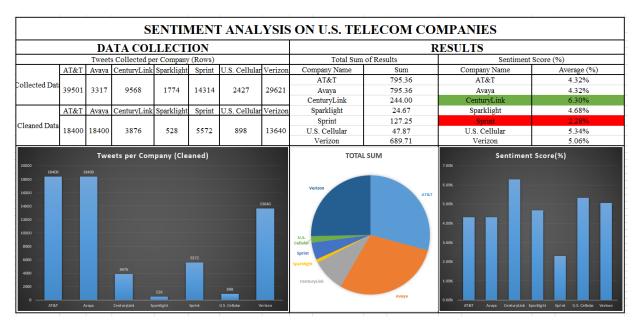

Figure 7: Excel Dashboard representing Results

D. CONCLUSION

On analyzing sentiments from people's real-time reviews, and by visualizing the whole results, we get the conclusion that U.S. Telecom Company i.e. <u>CenturyLink</u> is most liked by the users as it gets the maximum positive reviews i.e. average (%) of the Sentiment score (from Dashboard).

Based on the Sentiment Analysis results for each selected company, we can conclude the following:

✓ Most Liked Company: CenturyLink✓ Least Liked Company: Sprint Corp.
